YALE HOISTS FWE SERIES TROLLEYS ¼, ½, 1, 1½, 2, 3 & 5 TON Publication Part No. FWE-680

SECTION 1 - GENERAL INFORMATION

1-1 General

Yale FWE trolleys are designed for use with hook mounted hoists with rated loads up to 5 Tons. Adjustment to a wide range of beam sizes is accomplished with the placement of spacer washers, as described in paragraph 2-1.

1-2 Industrial Use Only

The hoisting equipment described in these instructions is intended for industrial use only, and should not be used to lift, support, or otherwise transport people.

1-3 Load Ratings

Before installing, make certain that the capacity of the hoist does not exceed the rated load of the trolley, and that the supporting structure is capable of supporting the weight of the load, hoist and trolley with a generous factor for safety.

SECTION 2 - INSTALLATION

2-1 Installation and Adjustment

- Measure I-beam flange width. Refer to the spacer washer adjustment chart (Chart 3 on reverse) for initial trolley adjustment. Check "X" dimension (see Figure 1 below) against Chart 3 and compare wheel flange spacing to beam flange width measurement before actually installing trolley on beam.
- Place trolley on beam and tighten the hanger shaft locknuts (see Chart 1 for locknut torque). The hanger shaft must extend completely through each locknut.

FIGURE 1

- Observe trolley operation. The trolley should move freely with the wheel flanges as close as possible to the edge of the I-beam. If it appears that the trolley sideplates could be moved closer together and still maintain freedom of movement, move one additional washer from location C to location D (Figure 1).

- If additional adjustment is required, be sure to keep the hanger plate as near to the center of the trolley as possible. There should be no more than one washer difference between locations B and C (Figure 1).

2-2 Curved Beam Operation

Yale FWE trolleys can operate on curved beams. Slightly increased wheel spacing may be required on curved beams. See Chart 1 for minimum recommended radius curves.

CHART 1 - MINIMUM RADIUS & LOCKNUT TORQUE

Model	Min. Radius	Locknut Torque
FWE ¼ Ton	36 in.	125 ft.-lbs.
FWE ½ Ton	36 in.	125 ft.-lbs.
FWE 1 Ton	48 in.	125 ft.-lbs.
FWE 1½ Ton	60 in.	125 ft.-lbs.
FWE 2 Ton	60 in.	125 ft.-lbs.
FWE 3 Ton	60 in.	150 ft.-lbs.
FWE 5 Ton	60 in.	150 ft.-lbs.

SECTION 3 - MAINTENANCE

3-1 Periodic Inspection

This trolley should be inspected periodically for wear and its continued ability to support the load. The frequency of inspection will depend on the severity of trolley use. It is recommended that the user begin with a monthly inspection and extend periods to quarterly, semi-annually or annually based on monthly experience.

3-2 Inspection Items

The trolley should be visually inspected for the following conditions:

- Loose locknuts.
- Sideplate damage or bending.
- Hanger plate wear, cracks, or distortion.
- Wheel wear, cracks, or worn bearings.

Any worn parts should be replaced immediately. See Chart 2 below for repair parts.

CHART 2 - PARTS LIST

Index No.	1	2	3
Part Name	Wheel	Ball Bearing	Retaining Ring
FWE ¼ Ton	647057425	647057450	011003000
FWE ½ Ton	647057425	647057450	011003000
FWE 1 Ton	647057426	022061000	015918400
FWE 1½ Ton	647057427	015128300	015915600
FWE 2 Ton	647057427	015128300	015915600
FWE 3 Ton	647057428	015120800	015915900
FWE 5 Ton	647057429	015126400	015916300

NOTE: Due to manufacturing tolerances and possible flange wear, the actual beam width may vary from those shown. The beam flange width should be checked before installation, and trolley spacing should be adjusted accordingly.
